Depression in Later Life

Deborah Serani 2016-06-09 The geriatric population, defined as men and women 65 years and older, is the fastest growing population in the world. While gerontology, the study of the aging process in human beings, has brought insights about the physical, emotional, and social needs of this population, little attention has been given to the mental health of the aging, and often treatable disorders are overlooked entirely.

Depression is one of the leading mental disorders in any age group, but among the elderly it is often viewed as a normal part of aging. But it's not. Depression at any age requires attention and treatment. For sufferers and their families and caregivers, this go-to guide introduces readers to depression among the aging and elderly. It looks at both sufferers who've been diagnosed in their younger years as well as those with a new diagnosis, and reviews the symptoms, the diagnostic process, treatment options including alternative and holistic approaches, and long term care for those experiencing mild, moderate, or severe depression. With real stories throughout, the book illustrates the many forms depression can take, and Serani offers a compassionate voice alongside practical advice for sufferers, caregivers, and families. An extensive resource section rounds out the book. Anyone suffering from depression in later life, and anyone who cares for someone suffering, will want to read this important guide to living well with depression in the golden years.

True Visions

Emile H.L. Aarts 2006-12-13 Ambient intelligence (AI) refers to a developing technology that will increasingly make our everyday environment sensitive and responsive to our presence. The AI vision requires technology invisibly embedded in our everyday surroundings, present whenever we need it that will lead to the seamless integration of lighting, sounds, vision, domestic appliances, and personal healthcare products to enhance our living experience. Written for the non-specialist seeking an authoritative but accessible overview of this interdisciplinary field, True Visions explains how the devices

making up the AI world will operate collectively using information and intelligence hidden in the wireless network connecting them. Expert contributions address key AI components such as smart materials and textiles, system architecture, mobile computing, broadband communication, and underlying issues of human-environment interactions. It seeks to unify the perspectives of scientists from diverse backgrounds ranging from the physics of materials to the aesthetics of industrial design as it describes the emergence of ambient intelligence, one of today's most compelling areas of innovation.

Lost on Planet China

J. Maarten Troost 2009-05-12 The bestselling author of *The Sex Lives of Cannibals* returns with a sharply observed, hilarious account of his adventures in China—a complex, fascinating country with enough dangers and delicacies to keep him, and readers, endlessly entertained. Maarten Troost has charmed legions of readers with his laugh-out-loud tales of wandering the remote islands of the South Pacific. When the travel bug hit again, he decided to go big-time, taking on the world's most populous and intriguing nation. In *Lost on Planet China*, Troost escorts readers on a rollicking journey through the new beating heart of the modern world, from the megalopolises of Beijing and Shanghai to the Gobi Desert and the hinterlands of Tibet. *Lost on Planet China* finds Troost dodging deadly drivers in Shanghai; eating Yak in Tibet; deciphering restaurant menus (offering local favorites such as Cattle Penis with Garlic); visiting with Chairman Mao (still dead, very orange); and hiking (with 80,000 other people) up Tai Shan, China's most revered mountain. But in addition to his trademark gonzo adventures, the book also delivers a telling look at a vast and complex country on the brink of transformation that will soon shape the way we all work, live, and think. As Troost shows, while we may be familiar with Yao Ming or dim sum or the cheap, plastic products that line the shelves of every store, the real China remains a world—indeed, a planet—unto itself. Maarten Troost brings China to life as you've never seen it before, and his insightful, rip-roaringly funny narrative proves that once again he is one of the most entertaining and insightful armchair travel companions around.

Biosemiotic Research Trends

Marcello Barbieri 2007 Biosemiotics (bios = life and semion = sign) is an interdisciplinary science that studies communication and signification in living systems. Communication is the essential characteristic of life. An organism is a message to future generations that specifies how to survive and reproduce. Any autocatalytic system transfers information (ie initial conditions) to its progeny so that daughter systems will eventually reach the same state as their parent. Self-reproducing systems have a semantic closure because they define themselves in their progeny. A sign (defined in a broadest sense) is an object that is a part of some self-reproducing system. A sign is always useful for the system and its value can be determined by its contribution to the reproductive value of the entire system. The major trend in the evolution of signs is the increase of their complexity via development of new hierarchical levels, ie, metasystem transitions. This book presents new research in this dynamic field.
